

## Mobile Alarm Systems

Feel free to get out and enjoy life, knowing help is always available.

Remain independent; free to go wherever you like, and do the things you love without causing your loved ones to worry with a Mobile Alarm System from INS LifeGuard. With the press of a button, you're in contact with an experienced nurse, wherever you are. ***That's unique to INS LifeGuard!***

Unlike other systems that depend on a friend or family member being available when you need help, our systems send an alarm through to a nurse in our 24/7 Emergency Response Centre — *so help is always available.*

The nurse can speak with you via speakerphone and assess the situation. The built-in GPS locator ensures we'll be able to locate you in an emergency and send help at once — even if you are not able to respond.

Our mobile alarms are fully featured, stand-alone systems, so they're not tethered to a base unit in your home. They don't require a telephone line or broadband connection. Learn more on the next page and choose the option that best suits your needs.

*INS LifeGuard Mobile Alarm Systems provide assurance that with the simple press of a button you can contact a nurse at any time of the day or night and know that help is at hand — wherever you may be.*

## INS LifeGuard Mobile Alarm Systems

We offer three Mobile Alarm Systems — one is sure to suit your lifestyle.

### LifeGuard Mobile

You can purchase the complete system from, or download the app for your existing compatible phone. LifeGuard Mobile has all the features of our SmartHome IP Dialler, but on a mobile phone so you can easily take it wherever you go.

Pressing the HELP button on the LifeGuard Mobile sends an alarm through to a nurse in our 24/7 Emergency Response Centre. The built-in GPS locator ensures that we'll be able to speak to you, locate you and send assistance — even if you are not able to respond.

These days most of us take a smartphone wherever we go anyway, so why not use it to make your alarm system portable?

### LifeGuard SmartTracker

The LifeGuard SmartTracker is perfect for seniors who like to be independent and active. It is a stylish pendant that works using the same cellular phone technology as a mobile phone, but without the complicated features.

Simply press a button to send an alarm to a nurse in our 24/7 Emergency Response Centre. It also functions as a fall detector, and has a docking station for easy charging. Waterproof IPX6, so it can safely be worn in the shower (but is not submersible in water).

### LifeGuard SmartWatch

Our LifeGuard SmartWatch is the very latest in wearable technology. More than just a watch, this device is also a mobile Personal Response System / Medical Alarm, a GPS Tracking Device / Locator, and even functions as a mobile phone.

Best of all you can rest assured knowing it's supported by INS LifeGuard, which means all alarms are handled by qualified nurses.

*Specifications subject to change at discretion of INS LifeGuard.*
